

Press Release

Goldschmidt Thermit Group acquires SRS Sjölanders, Swedish manufacturer of road-rail vehicles

Leipzig, 09.08.2016: The [Goldschmidt Thermit Group](#) based in Leipzig, Germany is expanding in Scandinavia. The global leader for continuous joint welding and the maintenance and repair of rail systems has acquired [SRS Sjölanders AB](#) based in Osby, Sweden. The company is a global technology leader in the field of vehicles designed to run on rails and the road. SRS Sjölanders is specialized in the manufacture of road-rail vehicles suitable for the installation, inspection and maintenance of overhead lines and the inspection of bridges and tunnels as well as road-rail heavy duty cranes and road-rail flash butt-welding machines.

"The whole of the Goldschmidt Thermit Group will benefit from the special expertise of SRS Sjölanders in the development and production of road-rail vehicles, in particular the division for road-rail grinding machines, but also in our core area of rail welding. The acquisition represents an important strategic addition to our product range for the maintenance of rail systems worldwide", explains Dr. Hans-Jürgen Munding, CEO of the Goldschmidt Thermit Group.

SRS Sjölanders can look back on more than a century of company history and has extensive experience in the railway industry. The core of the technical developments at SRS Sjölanders is the patented road-rail system with a hydrostatic drive where there is no contact between the normal rubber wheels of the chassis and the track wheels. When the vehicle runs on rails it rests completely on the track wheels. The design enables excellent performance in terms of safety, traction, tracking stability, brake power, speed and travel comfort. More than 500 vehicles around the world are equipped with the patented road-rail system which enables transfer over to the railway track in less than two minutes.

"We see ourselves as a high-tech supplier to the railway industry. Together with the Goldschmidt Thermit Group we can expand our global customer base and open up new markets for our products and services", emphasizes Peter Sundström, Managing Director of SRS Sjölanders. In addition to road-rail vehicles, SRS Sjölanders offers its customers an extensive range of maintenance services.

"The global trend towards more intensive use of railway networks is leading to ever shorter time slots available for maintenance", says Stefan Damm, Head of Special Projects at the Goldschmidt Thermit Group. "The expertise of the Goldschmidt Thermit Group and SRS Sjölanders for the integration of more and more technology in road-rail vehicles will enable the efficient exploitation of track possession periods."

About the Goldschmidt Thermit Group

The Goldschmidt Thermit Group is a global leader in the areas of continuous joint welding and the maintenance of rail systems. The roots of the company go back to the invention of the THERMIT® process by Professor Hans Goldschmidt at the end of the 19th century. Today the Goldschmidt Thermit Group comprises more than 20 medium-sized companies and serves the international growth market for railway infrastructure. The group employs approx. 1.000 people and maintains production and service locations around the world. In the financial year for 2015, the group achieved a total consolidated turnover of 135 million euros.
